

# Deep Cleaning & Maintenance Program for Synthetic Turf

## EXTEND FIELD LIFE, ENHANCE PERFORMANCE

Stretching, icing, massage – athletes take care to maintain their bodies for peak performance and extend their playing careers. The fields on which they play require the same level of care.

Synthetic fields that are improperly cleaned and maintained can have costly problems. Debris can work its way deep into the infill causing drainage issues. The infill can be compacted leading to a decline in performance and an increase in injuries.

To avoid these issues, normal grooming and upkeep are a must. Adding a deep cleaning and turf maintenance program can enhance such efforts by extending the life of your entire synthetic turf system and ensuring that it continues to perform at its optimal level for your athletes.

## TURN TO THE TURF PROFESSIONALS

Managing such a program on your own can be challenging. It requires that you have available time, properly trained staff and expensive equipment.

Fortunately, there's another option – turning to the synthetic turf professionals at Sports Construction Group. They have the experience, personnel and tools to keep your turf looking and performing at its best.

Deep Cleaning & Maintenance Program  
FOR SYNTHETIC TURF

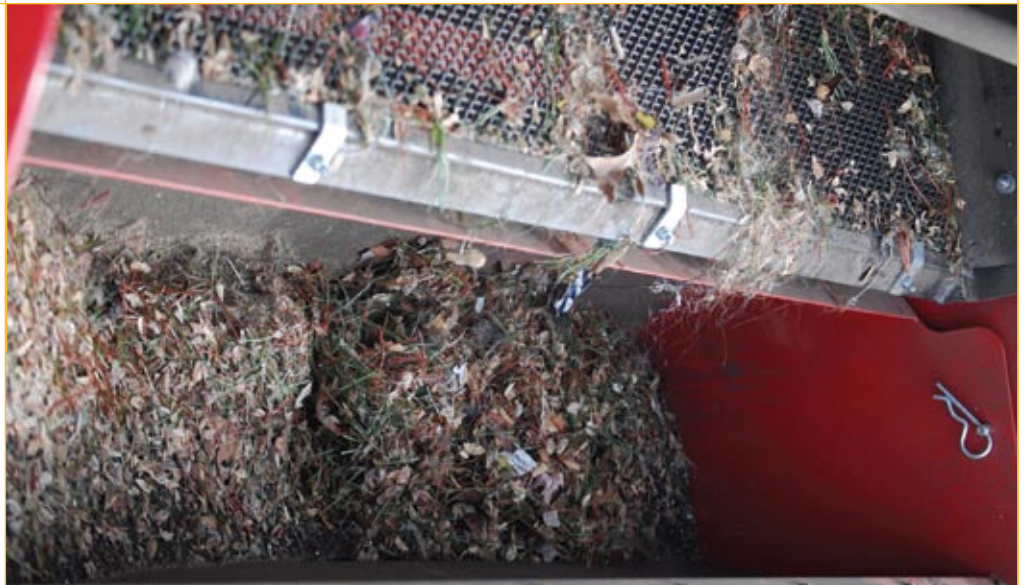

### THE SCG DEEP CLEANER

Manufactured specifically for synthetic turf systems, the SCG Deep Cleaner penetrates deep and provides a thorough cleaning.

It works by removing the very top portion of the infill layer and running it through a vacuum chamber that removes any airborne contaminants. The infill is then run through an oscillating mesh screen specifically graded to capture debris, such as leaves, hair, dander, sunflower seeds, pins and other foreign substances. The clean infill then drops back in to the turf.

The SCG Deep Cleaner is also equipped with a nylon power broom and rake system that is specifically designed to agitate the synthetic turf fibers allowing them to stand erect while redistributing and leveling the top layer of infill.

The SCG Deep Cleaner removed nearly 30 pounds of debris from a field that is only five months old and is regularly groomed and maintained.

### DEEP CLEANING & MAINTENANCE PROGRAM

The SCG Deep Cleaning & Maintenance Program includes:

- deep cleaning of infill material and removal of surface debris
- power grooming of synthetic turf surface
- checking all inlays and seams
- checking edge attachment detail
- checking infill level and overall condition of field

SCG recommends deep cleaning and grooming of your synthetic turf surface twice yearly for preventative maintenance. However, we can tailor any combination of our offered services to your individual needs and budget.

### KICK THINGS OFF

**Keep your field and the athletes that play on it performing at their best with the SCG Deep Cleaning & Maintenance Program.** To kick things off, contact your SCG sales representative today for more information and pricing.
